

Health economist/economic modeler, Broadstreet Health Economics and Outcomes Research

We are an independent consultancy in beautiful Vancouver British Columbia, specializing in epidemiology and health economics, with a particular focus on creating customized solutions to best meet our clients' diverse needs. Our team is comprised of epidemiologists, health economists, statisticians, and IT specialists. Our projects are led by senior team-members with extensive experience across a wide range of HEOR studies. We have an extensive network of external academic and clinical experts who collaborate on studies that lie within their core areas of expertise. We are looking to hire an experienced health economist/modeler to develop economic models and lead modeling projects

Responsibilities will include:

- Designing and implementing health economic models; including cost-effectiveness and budget impact models
- Contributing to epidemiologic and economic models
- Scientific writing
- Statistical analysis (dependent on experience and training)
- Conducting systematic literature review and evidence synthesis projects

Job qualifications:

- MSc or PhD in Epidemiology, Health Economics, Statistics, Biostatistics, or Public Health, or equivalent experience
- 3-5 years of experience developing health economic models in a consultancy or academic capacity.
- Strong independent working skills
- Excellent oral and written communication
- Organizational, multi-tasking and problem solving skills, with the ability to work independently within a team environment as well as the ability to work under pressure to meet deadlines
- Proficiency with Microsoft Outlook, Excel, Word, PowerPoint is required, as well as familiarity with at least one statistical package.

We offer a generous salary and benefits package, relocation assistance, and an opportunity to work in a young growing collaborative work environment.
